F&A expenditures pay for services that every OSU researcher needs. For every $2 spent supporting OSU researchers at the bench and in the field, an additional $1 is needed to pay for utilities, computer services, libraries and support staff. F&A expenditures are essential to operating in a competitive research environment.

Costs of Federally Sponsored Research

The total cost of federally sponsored research includes a combination of both direct and facilities and administrative (F&A) costs. Both types of expenditures are key to an institution’s ability to conduct cutting-edge research. F&A consists of the construction and maintenance costs of laboratories and high-tech facilities; energy and utility expenses; and safety, security, and other government-mandated expenses. These costs are real and research cannot be conducted without them.

Direct costs - These expenses solely cover research and include lab supplies and equipment, salaries and stipends for researchers and graduate students, and travel costs for conducting and sharing research.

Upkeep of any building space not used directly for federally-funded research, such as classrooms or lobbies, is not covered by F&A reimbursement.

Utilities – ventilation, heat, air conditioning, water, and lighting

Secure data storage, internet, telecommunications, and high-speed data processing

Radiation and chemical safety, including safety, training, and hazardous waste disposal

Personnel in support of research, including security, financial, administrative, technical, maintenance, and janitorial staff

Library and research facilities

Advanced research lab equipment

Costs of federal, state, and local regulatory compliance, including human and animal safety review boards

Direct costs
F&A costs
No federal funds used
